

Private evidence. Reviewable application work.

Turn scattered documents into traceable, owner-reviewed evidence without quietly changing originals or making submission decisions.

BUILT FOR THE REVIEW STEP - NOT THE SUBMIT BUTTON

1. Store privately

Upload documents to an owner-scoped vault. Extract text and route scanned inputs through a bounded private workflow.

2. Map explicitly

Inspect ordinary PDF form fields and map only compatible owner-confirmed facts. Unsafe forms take an assisted route.

3. Review output

Generate a separate private review copy and deterministic packet manifest. Originals are never overwritten.

THE SAFE PATH

HONEST BOUNDARY

Signed, XFA, static, unsupported, and non-Latin forms are routed to assisted review - never silently edited.

WHAT A DEMO PROVES

- **Private by default** Owner-scoped evidence, mappings, and artifacts.
- **Originals preserved** A filled document is a distinct review copy.
- **Traceable review** A manifest is an inventory, not a submission claim.

Owner-confirmed facts. Review-only outputs. No silent submission.
