

PAPERTRAIL

Private evidence, kept review-first.

Hackathon demonstration handout

- Private originals stay private.
- Owner confirmation is explicit.
- Generated PDFs are separate review copies.
- No submission or eligibility claim is made.

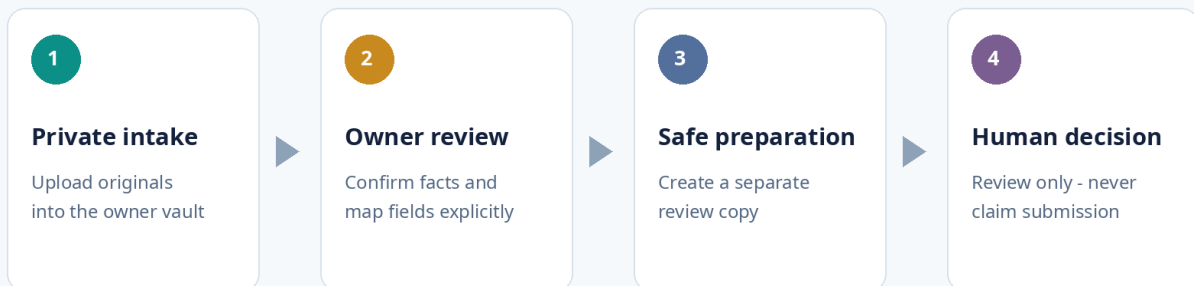

The review-first workflow

A small, safe tour of the product's decision boundaries

PAPERTRAIL

A private, review-first evidence workflow

Original documents remain private. Every generated item is review-only.

Demonstration asset - fictional data only

What the demo proves

- The owner can inspect and confirm facts without treating them as institution-verified.
- An ordinary AcroForm can become an immutable, private review copy only after explicit mapping.
- Signed, XFA, static, or non-Latin edge cases remain in an assisted path rather than being altered automatically.

Live demonstration script

Use the companion fixture pack for a fast, reproducible showcase

1

Upload an ordinary form

Use 01-ordinary-acroform-review-copy.pdf and inspect its fields.

2

Confirm fictional values

Create harmless profile facts, map compatible values, and select a draft application.

3

Prepare review copy

Start the enabled worker. Verify a separate artifact appears as needs review.

4

Show safety boundaries

Use the image-only, signed-marker, XFA-marker, or Malayalam fixtures to show assisted handling.
